

vieure

VieCure superpowers oncologists

A Halo Intelligence platform and cancer knowledge base that empowers providers to personalize and manage patient care to make seemingly impossible outcomes possible and to make overcoming cancer a reality for patients while optimizing resources to yield better financial results. A reimagined neural operating system for cancer providers.

A perfect storm

Fewer physicals, more patients, plethora of data

Declining number of Oncologists

-2,250
oncologists

"A shortage of approximately 2,250
Oncologists by 2025"

ASCO forecast

Increasing complexity

Doubling
every 73 days

"In the 1980's medical data and evidence was doubling
every 7 years but by 2020 it will double every 73 days"

FDA yearly cancer drug approvals increased
200% from 2010 to 2020

Lack of time

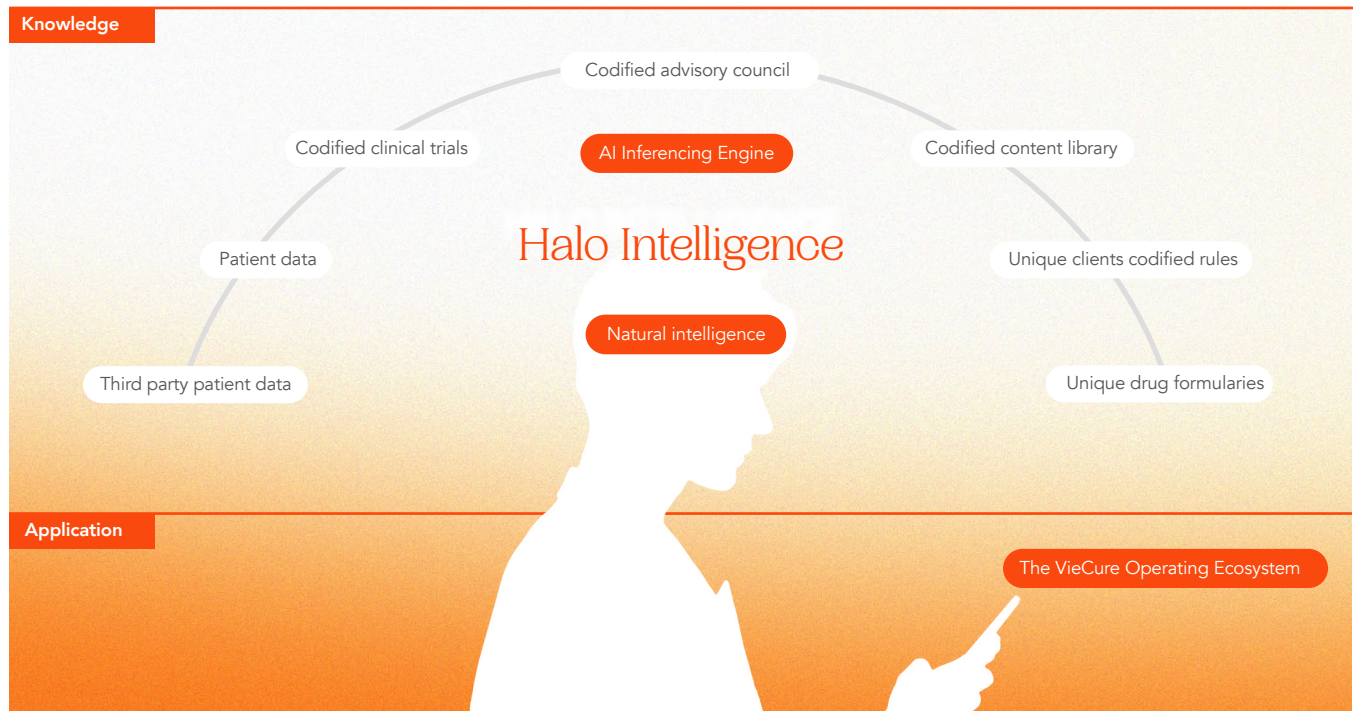

29hrs

"29 hrs per day is how long an oncologist would need
to read in order to stay updated on the latest FDA
approvals and clinical evidence"

Journal for European Society of Medical Oncology

The solution

VieCure superpowers oncologists

VieCure is the first whole knowledge system that brings together everything clinicians need to create the right treatment plan for every patient, every time. It does this by distilling data from multiple sources using a proprietary A.I. clinical inference engine that is connecting to VieCure clinical operating system.

The end result is a seamless marriage between VieCure’s artificial intelligence and the clinician’s own natural intelligence, creating what we call **Halo Intelligence**.

The value

Results/Benefits for oncologists, pharma, tech...

Simplifies the oncologist’s workload

Reduces administration, frees up time and assists in selecting the optimal treatment, the first time

Drives work to lowest cost competent provider

Lower costs

Fewer failed treatments, ER visits, and hospitalizations

Cost elimination of unnecessary systems

Increases practice revenue

Mitigates write-offs, opportunities for data revenue sharing, evidence based rebates, and more, new CPT codes (RTM)

4-10x return on fees

Better outcomes for patients/fewer toxicities

Improved clinical trial accrual

Accelerated adoption of precision oncology

Valuable real world data/real world evidence

Improve future treatment

Commercial purposes
